

COMMERCIAL VALIDATION PACKAGE

10-Day AI Coding Evidence Sprint

Core promise. Turn 100 to 1,000 deidentified coding records into encounter-level evidence bundles, exception findings, and review-ready exports in 10 business days. AuditLayer provides encounter-level evidence and exception monitoring for AI-assisted medical coding.

Who this is for

- AI coding vendors showing how each AI-coded encounter was handled
- RCM technology vendors fielding health system diligence questions
- Coding QA and revenue integrity leaders needing searchable proof
- Product, implementation, and customer success leaders at AI coding companies

What the customer provides

- 100 to 1,000 deidentified coding records in a flat file
- Fields following the AuditLayer coding evidence schema
- One contact for a 30-minute kickoff and a 30-minute readout
- No production access and no protected health information

What AuditLayer provides

- Ingestion and normalization into an encounter-level evidence model
- One evidence bundle per encounter: recommendation, thresholds, review, override, final codes, disposition
- Exception monitoring for skipped reviews, missing rationales, and mismatches
- An auditor narrative sample in review-ready language, not an auditor conclusion
- Exports that feed existing audit, BI, GRC, and review workflows

Sprint outputs

- Encounter-level evidence bundles for every record
- Exception findings report grouped by type and status
- Searchable encounter index with payer, site, service line, model filters
- Review-ready exports in CSV and a formatted summary
- Short auditor narrative sample across representative encounters

Success criteria

- Every record maps to one encounter-level evidence bundle
- Every exception is categorized, given a status, and traceable to its source
- A reviewer can open any encounter and see the full handling trail in the export
- Exports are ready for internal audit, revenue integrity, and diligence without rework

Pricing hypothesis

Proposed structure, not a fixed price: a 10-day sprint at \$2,500 to \$5,000, credited toward an annual contract if it converts.

CALL TO ACTION

Send 100 to 1,000 deidentified coding records and run a 10-day evidence sprint.
